

COVID-19 Rolling 7-Day Reproduction Number (R0) by Lockdown

U.S. states, through April 28. Data is lagged by one week for case delay and one week to observe for R0 computation. $R_0 < 1$ means the rate of new cases is decreasing.

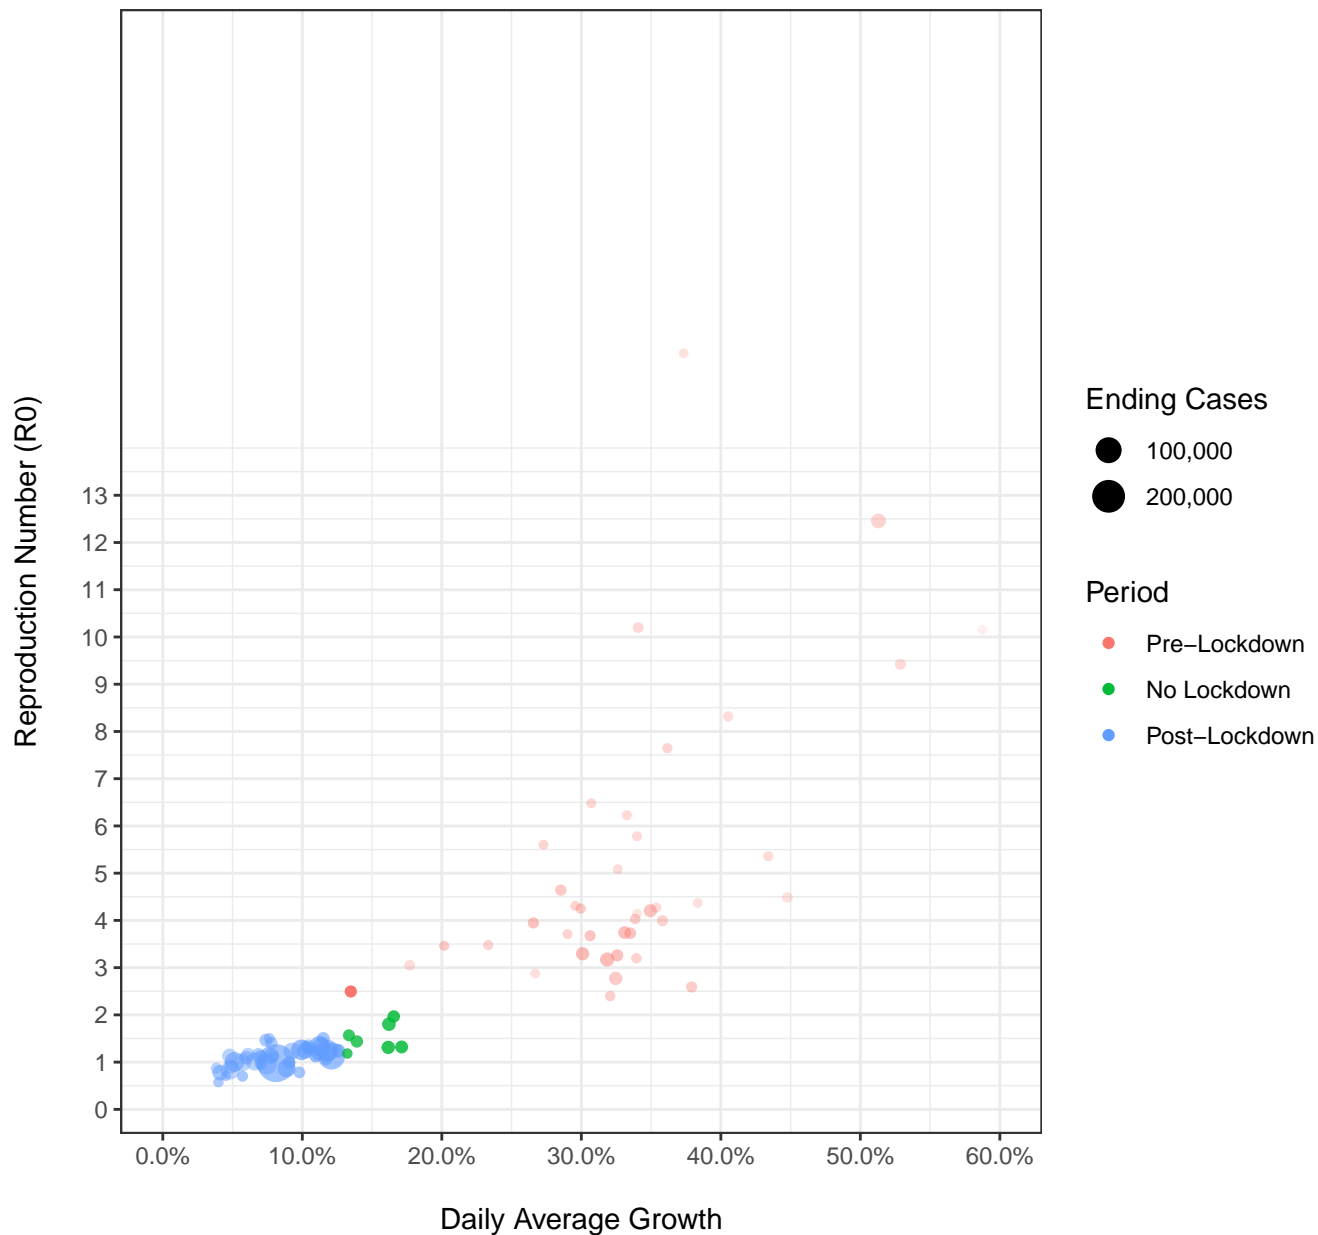

COVID-19 Rolling 7-Day Reproduction Number (R0) by Lockdown

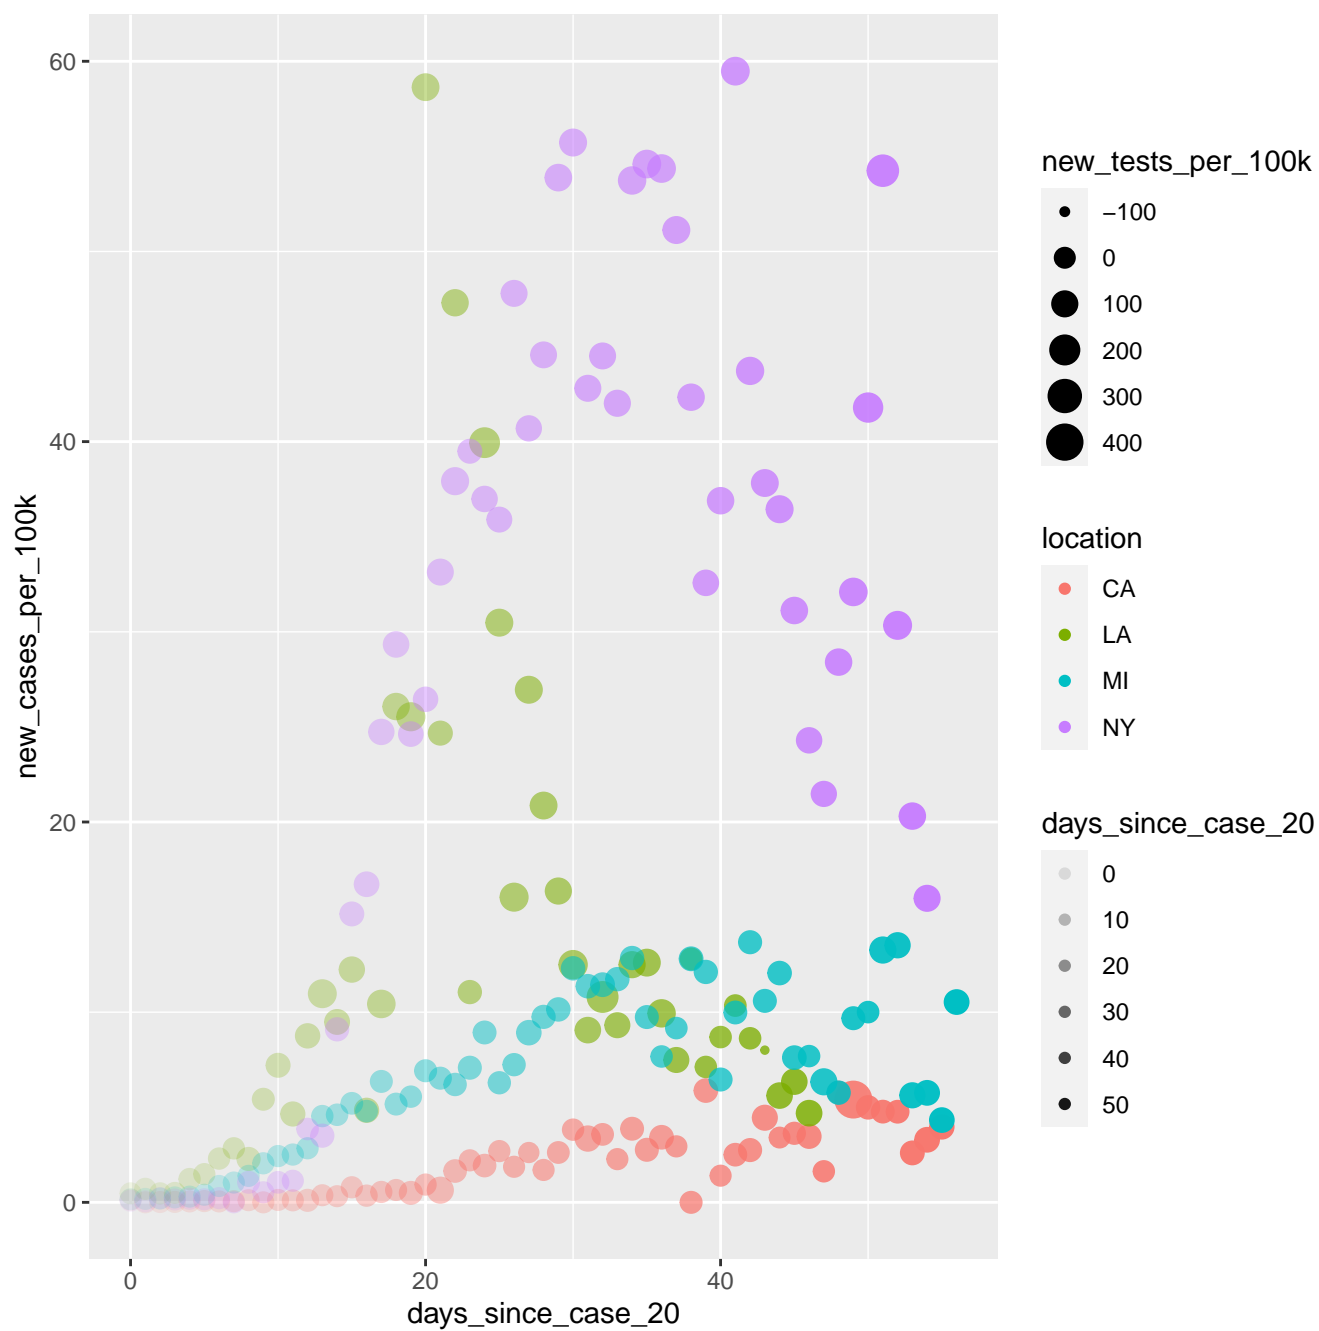

U.S. states, through April 28. State lockdowns are associated with a 55% decrease in COVID-19 R0 of 2.26 down to 1.02), though many areas experienced decreased transmission pre-lockdown shut down. Lines show median R0 and ribbons represent the 25th and 75th percentiles.
